

# Build Guide: Fraction Face

## 1 Explore your materials

### Sculpting Kit Includes:

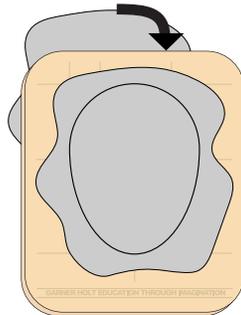

- Sculpting board with foam core
- Fraction Guide Insert
- Wax Clay
- Sculpting Tool Set

## 2 a. Remove the wax clay from its package and flatten it into a thin circular shape.

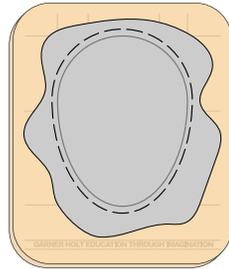

## b. Lay the clay over the foam core. Be sure the wax clay covers the entire core.

Tip: The wax clay will soften if warmed.

## 3 Trim the excess clay from around the edge of the core and smooth the edges.

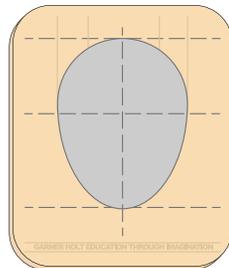

Save the excess clay for the next steps. The clay provided is wax-based and will never dry. This will allow you to sculpt over and over using the same material.

## 4 Using the point tool and fraction markers on your sculpting board, lightly mark your clay for the eyes.

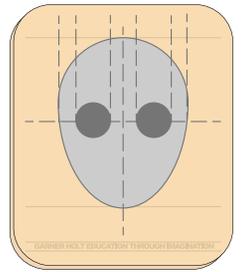

This will help you divide the face into equal proportions and guide the location of the facial features.

Use the black centerlines and the red 1/2 fraction markers for this step.

## 5 Add the eyes.

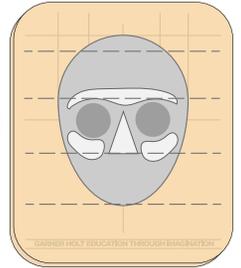

Using the vertical, orange 1/5 fraction markers and the horizontal centerline, press your fingers into the clay to create eye sockets.

## 6 Add protruding features.

Add facial features indicated by the horizontal, blue 1/3 fraction markers. These features are protruding so you will be adding clay.

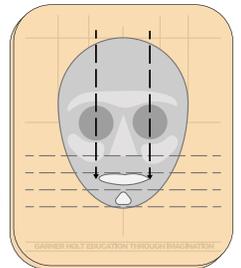

Add clay to the areas indicated on the diagram to the right. They represent the cheek bones, the nose and the brow bone.

## 7 Add the lips and chin.

Add facial features indicated by the horizontal, green 1/3 fraction markers and the black centerlines of the eyes. These features are protruding so you will be adding clay.

Add clay to the areas indicated on the diagram to the right. They represent the lips and chin.

## 8 Smooth your clay to whatever texture you wish and then add details such as hair (head and facial) ears, eyelids, wrinkles, eyebrows and accessories.
